

INVESTOR BRIEFING

The Capability Lens

What Others Can't See

Sub-Company Capability Intelligence for VC/PE

The Old Way

Traditional Top-Down Funnel

- 1 Screen by financials (P/E, revenue)
- 2 Filter by sector / geography
- 3 Rank by market cap
- 4 Manual management review
- 5 Static quarterly report
- 6 Company shortlist

What You Miss

80%

below the line of visibility

Capability gaps, operational moats, disruption trajectories, cross-industry pattern shifts

Financials tell you where a company has been. Capabilities tell you where it's going.

THE SOLUTION

The CE Workbench Way

Bottom-up agentic methodology -- autonomous, continuous, persistent

01

Industry Scan

Map capability landscape

02

Deep Research

Perplexity multi-source

03

Triangulation

Claude reasoning engine

04

Scoring

Bayesian consensus

05

Quadrant Map

Hot/Emerging/Cooling

06

Graph Build

Dependencies + clusters

07

C-Suite Lens

Role-specific perspectives

08

Alert Engine

Continuous monitoring

09

Memory

MemO persistence

● Perplexity Research ● Claude Reasoning ● MemO Memory

Five Interconnected Modules

All modules share a unified capability ontology and research memory layer

Quadrant xRay

KNOWLEDGE GRAPH

Spider Network

Capabilities cluster by affinity, not by industry label

"Birds of a feather" -- capabilities that co-evolve cluster together across industry boundaries

Three-Stage Analysis

Same Gap, Four Lenses

CEO

Strategic Imperative

"This gap threatens our market position. Competitors with AI underwriting achieve 40% faster quote cycles."

- Priority: Critical

CFO

P&L Impact

"Closing this gap reduces combined ratio by 3.5 points. ROI breakeven in 14 months."

- Priority: High

CTO

Technical Debt

"Legacy underwriting system blocks ML pipeline integration. Requires core platform modernization."

- Priority: High

CHRO

Talent Strategy

"Need 12 ML engineers and actuarial data scientists. Current team lacks AI/ML competencies."

- Priority: Medium

Agent Radar

Surfacing signals before they become consensus

3-quarter early detection advantage over traditional analysis

FRAMEWORK

The "New 20%"

Value chain stages x disruption heat x capability clusters

Capability X-Ray

Quadrant Distribution

Investment Implications

- 1 Underwriting AI is a defensible moat -- strong execution in the hottest quadrant
- 2 Operations gap at 42/100 is a drag on margins -- candidate for build-vs-buy
- 3 Compliance score (48) is below industry median -- regulatory risk flag

What We See That Others Don't

1

Sub-Company Resolution

We analyze individual capabilities within a company, not just the company as a whole

2

Cross-Industry Patterns

Recognize capability patterns that repeat across healthcare, banking, manufacturing, and more

3

Temporal Trajectory

Track capability evolution over time, not just current state -- where are things heading

4

Autonomous Research

Continuous agentic research with MemO memory -- intelligence that compounds over time

Static Deck vs. CE Workbench

Dimension	Static Deck	CE Workbench
Research Frequency	Quarterly / ad-hoc	Continuous autonomous
Data Sources	Analyst reports, filings	Multi-source triangulation
Personalization	One-size-fits-all	Role-specific C-suite views
Output Format	PDF / slides	Interactive workbench
Memory	None -- starts fresh	MemO persistent context

The Capability Workbench

Drag capabilities through a Double-Diamond pipeline. Claude critiques every card with five stable prompt kinds — outputs cached so refresh never re-bills.

What to invent (Uber pattern)

Leading or declining?

PROOF

Did the model see it coming?

We replay historical shocks through the same CVI engine that runs the live index. Dry-run mode, read-only — the live index is never polluted. Public at </proof>.

AGGREGATE DIRECTIONAL ACCURACY

74%

Across four curated historical events. Each event replayed twice through `computeCVI()` — once baseline, once with the shock injected.

PER-EVENT ACCURACY

WHAT THIS MEASURES

Directional accuracy under shock — does the engine's predicted CVI move match the recorded historical direction? Expected directions allowed to disagree with event sentiment: COVID is globally negative but positive for telehealth.

MARKETPLACE + MULTI-TENANT

Revenue mechanism on top of the moat.

CVI data is the platform's moat. The marketplace is how third-party analysts *build on it* and how the platform earns recurring revenue without owning every research artifact.

MULTI-TENANT WORKSPACE

Purchases attributed to your Clerk org.

When a buyer purchases on behalf of a team, every Clerk-org member sees the file in their library, watermarked with the downloading user's identity. SaaS-only — on-prem deployments fall back to per-user.

LISTING TYPES

- ▶ Reports (PDF, watermarked)
- ▶ Datasets (CSV / Parquet)
- ▶ Templates (analysis frameworks)
- ▶ Services (consulting hours)

Three Paths Forward

PATH 1

Quick Assessment

15-minute guided session targeting one company across key capability dimensions

Ideal for: Initial evaluation

PATH 2

Deep-Dive Workshop

Half-day working session across your portfolio with full capability X-ray and C-suite intelligence

Ideal for: Portfolio analysis

PATH 3

Platform License

Full workbench access with continuous monitoring, alerts, and persistent memory across your thesis

Ideal for: Ongoing intelligence
